## **Intended Learning Outcomes**

Upon completion of the programme, participants should be able to:

1. understand the basic theories and knowledge of local ecology and biodiversity;
2. recognise the current situation of and difficulties faced by ecological conservation in Hong Kong;
3. understand the theories of conservation methods and evaluate their effectiveness;
4. design conservation projects with creativity and team spirit, enhancing their problem-solving ability;
5. develop positive values to protect the environment and biodiversity, become willing to contribute to ecological conservation in Hong Kong.

## ◆ Introduction

Hong Kong has high biodiversity despite of its small land area. Yet, these environments and wildlife are facing different ecological conservation issues. This course is designed to help students understand the local ecosystems thoroughly, and how organisms interact with their ecological environments, with interactive and interesting learning approaches. Students are exposed to different skill sets to develop their full potential, such as field study, art, literature writing, photography and game design. In phase 3, students will design and complete conservation projects under the guidance of mentors and demonstrate the outcomes to the public.

The course consists of **THREE phases**. Phase 1 finished on 11 June.
