Intended Learning Outcomes

Upon completion of the gifted programme, gifted students should be able to:

1. describe the indispensability and current status of energy utilization in the world;
2. explain energy generation, transfer, storage, and efficiency;
3. evaluate various renewable energy for the pros and cons, especially in HK ;
4. develop an awareness of the necessity of energy conservation and the development of renewable energy for sustainability.

◆ Gifted Programme Introduction

Energy is omnipresent. Human beings are using more and more energy, mainly from fossil fuel. However, fossil fuel is not sustainable, which may run out in this century. Meanwhile, wide use of fossil fuels generates tremendous environmental pollutants and global warming gases. This course will introduce the fundamentals on energy generation, conversion, utilization, transfer and storage, and discuss the incurred environmental problems. Renewable energy provides a promising yet challenging solution for future energy utilization in order to achieve carbon neutrality. Students will also have an opportunity to conduct experiments (making battery and solar car) in the labs of university to obtain first-hand information.
